CSE 372: Control Systems (2)

Topic# 1

Introduction to Digital Control Systems

Prof. Wahied Gharieb Ali

CSE 372: Control Systems (2)

Instructor: Prof. Wahied Gharieb Ali Abdelaal
Office: 3rd Floor- R302
E-mail: wahid_ali@eng.asu.edu.eg - wahied@hotmail.com
Home Page: <http://portal.eng.asu.edu.eg/wahied>

Textbook:

- 1) M. Sami Fadali and Antonio Visioli, "Digital Control Engineering: Analysis and Design", Academic Press (Elsevier) 2nd edition, 2013.
- 2) Norman S. Nise, "Control Systems Engineering", Chapter 13, John Wiley & Sons, 6th edition, 2011.
- 3) Edited by William S. Levine, "Control Systems Fundamentals", CRC Press Taylor & Francis Group, Section IV – Digital Control, 2011.
- 4) Ioan D. Landau and Gianluca Zito, "Digital Control Systems: Design, Identification, and Implementation", Springer-Verlag 2006.

CSE 372: Control Systems (2)

CSE 372: Control Systems (2)

Additional Readings:

- 5) Wikibooks, "Control Systems", free download from http://en.wikibooks.org/wiki/Control_Systems, 2013.
- 6) Farid Golnaraghi and benjamin C. Kuo, "Automatic Control Systems", 9th Edition, John Wily & Sons, 2010.
- 7) K. J. Astrom and B. Wittenmark, "Computer Controlled Systems", Prentice Hall, 3rd Edition, 1997.
- 8) K. Ogata, "Discrete Time Control Systems", Prentice Hall, 2nd Edition 1995.
- 9) C. A. Rabbath and N. Léchevin, "Discrete-Time Control System Design with Applications", Springer 2014.
- 10) Gregory P. Starr, "Introduction to Applied Digital Control", Department of Mechanical Engineering The University of New Mexico, technical notes, 2nd edition, 2006.

Course Grading	Quizzes (10) Tutorial (10) Final Exam (110)	Assignments (10) Micro Project (10)
-----------------------	--	--

CSE 372: Control Systems (2)

CSE 372: Control Systems (2)

Course Policies:

1. Homework Submission:
Homework solutions should be submitted on the due date.
2. Late homework policy:
On time, in the class (100%), same day after class (90%), next day (70%), 2 days (50%), 3 days or more (0%).
3. Collaboration:
You are encouraged to discuss the assigned problems/projects with your classmates. But you are not allowed to talk about the final solution itself or to show your solution to others. Every student has to prepare his/her solution independently.
4. Preparing the final solution:
Please write your solution in a clear, readable, and concise form. Every answer should be fully justified.

Course Objectives

- ▶ Provide a background of digital control engineering and its applications.
- ▶ Analysis & design of digital control systems using transform and state-space techniques.
- ▶ Study the fundamentals of real time programmable controllers and SCADA systems.
- ▶ Emphasize the use of MATLAB for analysis and design.

Course Outline

- Introduction to Control Systems
- Sampled data systems and Z-transform
- Sampling and reconstruction
- Pulse transfer function
- Control design methods
- State space analysis and design
- Real time practical considerations
- Embedded Control systems
- Programmable Logic Controllers (PLCs)
- Supervisory control and SCADA Systems
- Course recap

Introduction to Control Systems

1. Linear Systems

2. Digital Control

3. Nonlinear Systems

4. Adaptive Control

5. Robust Control

6. Optimal Control

7. Intelligent Control

CSE 372: Control Systems (2)

Introduction to Control Systems

Control Systems Duality

Primal	Dual
Linear	Nonlinear
Continuous-Time	Discrete Time
Time Invariant	Time Varying
Deterministic	Stochastic
Model Based	Non-Model Based

CSE 372: Control Systems (2)

Introduction to Control Systems

Review on Fundamental Control System

- Mathematics for Dynamic Systems
 - Differential Equation
 - Transfer Function
 - State Space
- Time Response
 - Transient
 - Steady State
- Frequency Response
 - Bode and Nyquist Plots
 - Stability and Stability Margins

CSE 372: Control Systems (2)

Introduction to Control Systems

Basis of Analysis

(a)

$$R(s) = \frac{1}{s+2} \rightarrow C(s) = \frac{2s+3}{s+5}$$

(b)

Input pole

System zero

System pole

Output transform

$$C(s) = \frac{2s}{s+5} + \frac{3s}{s+5}$$

Output time response

$$c(t) = \frac{2}{5} + \frac{3}{5}e^{-5t}$$

(c)

Forced response Natural response

CSE 372: Control Systems (2)

Introduction to Control Systems

Time Response

System order = ?

CSE 372: Control Systems (2)

Introduction to Control Systems

First Order Transfer Function

$$G(s) = \frac{a}{(s+a)}$$

$$= \frac{1}{(\tau s + 1)}$$

Settling time = 4 τ

CSE 372: Control Systems (2)

Introduction to Control Systems

Second order transfer function:

$$G(s) = \frac{1}{\left(\frac{s}{\omega_n}\right)^2 + 2\zeta\left(\frac{s}{\omega_n}\right) + 1}$$

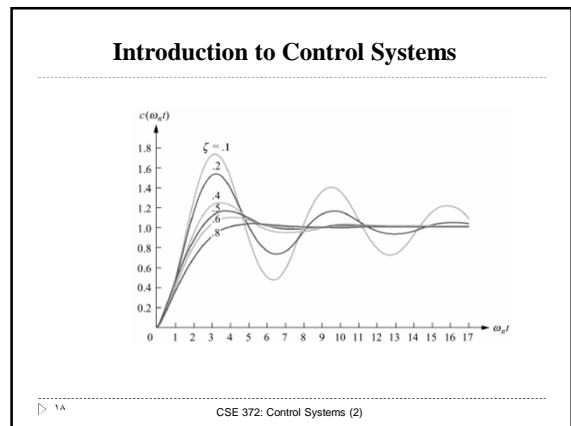

- ζ : damping ratio, ω_n : natural frequency
- $\zeta > 1$: overdamped
- $\zeta < 1$: underdamped
- $\zeta = 1$: critically damped
- $\zeta = 0$: undamped

Rise time

s-plane

CSE 372: Control Systems (2)

Introduction to Control Systems

Steady State Error

$$e_{ss} = e(t) \Big|_{t \rightarrow \infty} = sE(s) \Big|_{s \rightarrow 0}$$

$$E(s) = \frac{R(s)}{1 + G_c(s)G_p(s)}$$

CSE 372: Control Systems (2)

Introduction to Control Systems

Frequency Response:
The MOST useful concept in control theory

- Performance Measures
 - Bandwidth
 - Disturbance Rejection
 - Noise Sensitivity
- Stability
 - Yes or No?
 - Stability Margins (closeness to instability)
 - Robustness (generalized stability margins)

CSE 372: Control Systems (2)

Introduction to Control Systems

Bode Plot (Magnitude and Phase vs. Frequency) $G(s) = 1/(s + 2)$

CSE 372: Control Systems (2)

Introduction to Control Systems

Polar Plot: imaginary part vs. real part of $G(j\omega)$
 $G(s) = 1/(s + 2)$

CSE 372: Control Systems (2)

Introduction to Control Systems

Bandwidth of Feedback Control

- -3dB Frequency of CLTF $\frac{Y(j\omega)}{R(j\omega)} = \frac{G_c(j\omega)G_p(j\omega)}{1 + G_c(j\omega)G_p(j\omega)}$
- 0 dB Crossing Frequency (ω_c) of $G_c(j\omega)G_p(j\omega)$
- Defines how fast y follows r

CSE 372: Control Systems (2)

Introduction to Control Systems

Disturbance Rejection

$$\frac{Y(j\omega)}{D(j\omega)} = \frac{1}{1 + G_c(j\omega)G_p(j\omega)}$$

measures disturbance rejection quality

CSE 372: Control Systems (2)

Introduction to Control Systems

Noise Sensitivity

$$\frac{U(j\omega)}{N(j\omega)} = \frac{-G_c(j\omega)}{1 + G_c(j\omega)G_p(j\omega)}$$

$\approx -G_c(j\omega)$ at high frequency

CSE 372: Control Systems (2)

Introduction to Control Systems

Nyquist Plot

Using $G(j\omega)$ to determine the stability of

$G(s) = G_c(s)G_p(s)$
 $H(s)$: Sensor and Filter

Nyquist Contour

CSE 372: Control Systems (2)

Introduction to Control Systems

Nyquist Stability Criteria

(a) Stable

(b) Unstable

○ = zeros of $1 + G(s)H(s)$
 = poles of closed-loop system
 Location not known

× = poles of $1 + G(s)H(s)$
 = poles of $G(s)H(s)$
 Location is known

▶ ۱۸ CSE 372: Control Systems (2)

Introduction to Control Systems

Gain and Phase Margins

(-1,0) is equivalent of $0\text{dB} \angle (-180)^\circ$ point on

Gain margin = $G_M = 20 \log a$

Phase margin = $\Phi_M = \alpha$

Gain plot

Phase plot

Introduction to Control Systems

Digital Control Concepts

- Sampling
 - Rate
 - Delay
- ADC and DAC
 - Resolution (quantization levels)
 - Speed
 - Aliasing
- Digital Control Algorithm
 - Difference equation

CSE 372: Control Systems (2)

Introduction to Control Systems

Discrete System Description

- Discrete system

$u[n] \rightarrow \boxed{h[n]} \rightarrow y[n]$
 $h[n]: \text{impulse response}$
- Difference equation

$$\sum_{k=0}^N a_k y[n-k] = \sum_{k=0}^M b_k u[n-k]$$

CSE 372: Control Systems (2)

Introduction to Control Systems

Discrete Fourier Transform
and z-Transform

$$X(e^{j\omega}) = \sum_{n=-\infty}^{\infty} x[n]e^{-j\omega n}$$

$$X(z) = \sum_{n=-\infty}^{\infty} x[n]z^{-n}$$

CSE 372: Control Systems (2)

Introduction to Control Systems

Discrete Transfer Function and Frequency Response

$$H(z) = \frac{Y(z)}{X(z)} = \frac{\sum_{k=0}^M b_k z^{-k}}{\sum_{k=0}^N a_k z^{-k}}$$

$$H(e^{j\omega}) = H(z)|_{z=e^{j\omega}}$$

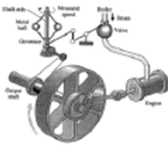

CSE 372: Control Systems (2)

Introduction to Control Systems

- **General system**

A system is a collection of components which interact with each other and with the environment (by information or energy links) from which the system is separated by a notational boundary.

CSE 372: Control Systems (2)

Introduction to Control Systems

Problems Formulation

- ⊙ **Control system**
A control system is a system capable of *monitoring* and *regulating* the operation of a process or a plant. The study of control system is essentially a study of an important aspect of systems engineering and its applications.
- ⊙ **Problem formulation**
Determine a control law to *stabilize* the system and to achieve *asymptotic reference tracking* and *disturbance rejection*.

▶ ۴۳ CSE 372: Control Systems (2)

Introduction to Control Systems

(b) the X-45 (UCAV) unmanned combat aerial vehicle. (Photographs courtesy of NASADryden Flight Research Center.)

▶ ۴۴ CSE 372: Control Systems (2)

Introduction to Control Systems

Control Engineering Practice

- ⊙ Control engineering is concerned with the analysis and design of goal-oriented (task-oriented) systems. Control systems are used to achieve
 - > increased productivity and
 - > improved performance.
- ⊙ **Main tasks of control engineering**
Modelling, Analysis, Design and Development.

▶ ۴۵ CSE 372: Control Systems (2)

Introduction to Control Systems

- ⊙ Automation
The control of industrial process (manufacturing, production, etc.) by automatic rather than manual means is called automation.
- ⊙ Robust control
The system can be controlled by the controller in a desired manner, in spite of the allowable disturbances and changes in the system parameters/ uncertainties.
- ⊙ Intelligent control system
The system has capabilities of planning, scheduling, adaptation, and learning.

CSE 372: Control Systems (2)

Introduction to Control Systems

Control System Design

Engineering design is the main task of the engineer.

Specifications
The closed-loop control system performance specifications include:

- 1) good regulation against disturbance,
- 2) desirable responses to commands,
- 3) realistic actuator signal,
- 4) low sensitivity, and
- 5) robustness

The *design* is to achieve appropriate design specifications and rests on four characteristics: complexity, tradeoffs, gaps and risk.

CSE 372: Control Systems (2)

Introduction to Control Systems

Design Process

```

    graph TD
      A(Establish control goals) --> B(Identify the variable to control and the manipulating variables)
      B --> C(Determine the performance specifications)
      C --> D(Select sensors and actuators)
      D --> E(Construct the system model)
      E --> F(Select a controller and adjust the controller parameters)
      F --> G(Simulation study and validation)
      G --> C
  
```

CSE 372: Control Systems (2)

Introduction to Control Systems

Classifications of control systems:

- 1) **Regulatory System** (process control)
Maintains a parameter at or near a setpoint
- 2) **Follow-up System** (servomechanism)
Causes the output to follow a predefined path.
- 3) **Event Control System**
Controls a sequential series of events.

۱۹ CSE 372: Control Systems (2)

Introduction to Control Systems

1) Process control refers to a control system that oversees some industrial processes so that a uniform, correct output is maintained. Control variables are: temperature, flow, level, and pressure of liquids and gases.

۲۰ CSE 372: Control Systems (2)

Introduction to Control Systems

2) Servo Control
Traditional term to a closed-loop system that directs the precise movement of an object, such as an antennae.

۲۱ CSE 372: Control Systems (2)

Introduction to Control Systems

3) Sequentially Controlled Systems

- ▶ A series of defined tasks to be performed.
- ▶ Time-Driven
 - Each operation in the sequence is performed for a certain amount of time. May be open-loop control.
- ▶ Event-Drive:
 - Each operation is performed until some event goal is reached. Must be closed-loop control.

CSE 372: Control Systems (2)

Introduction to Control Systems

Action	Sequence	
Fill	0 - 5	20 - 25
Agitate	5 - 15	25 - 30
Drain	15 - 20	30 - 35
Spin	20 - 25	35 - 40

Time

CSE 372: Control Systems (2)

Introduction to Control Systems

Numerical Control: type of digital control on machine tools which use a numeric coordinate system to define the movement of components, typically in X,Y, Z coordinates.

Today's systems can accept data directly from CAD drawing information for the control of the operation. **Computer-aided Manufacturing (CAM).**

The diagram illustrates a CNC machine tool. It features a cutting tool mounted on a vertical spindle, which is driven by a motor and has a label for RPM. The spindle is positioned above a rectangular workpiece on a table. The table is supported by a base with three motors, each associated with a coordinate axis: X, Y, and Z. Arrows indicate the direction of movement for each axis.
